**Position 1) Conservation GIS Intern**

This position will be focused on using Geographic Information Systems (GIS) to provide insights on the region’s conservation history, recent landcover changes, population and potential future changes, and--working with experts--help identify areas most suitable for forests, farms, and responsible development. Applicants should be interested in land protection and have experience with, or have a strong motivation to learn, GIS and have good analytic skills.

**Position 2) Regional Planning Intern**

This position will focus on using planning documents from community to regional scales and social, demographic and economic data to summarize existing frameworks for action and to provide detailed characterization of the Connecticut River Valley’s economic, demographic, and cultural variation. The student will be involved in developing a coordinated regional plan in collaboration with mentors and NGO partners. Applicants should have experience or coursework in regional planning, and an interest in land protection, agriculture, and urban issues.

Interns will work within a regional land conservation initiative:

**Wildlands & Woodlands**

*A Vision for the New England Landscape*
